## Aluminum Sliding Glass Door Features

---

The Ambassador Patio Aluminum Door system is available in numerous configurations to fill most any opening. **Available in 2-Panel, 3-Panel and 4-Panel systems**. Dual finish options will enhance the exterior and interior of your home. **Choose a white or tan interior** with a bronze exterior to achieve the look you desire. The Ambassador's standard tandem rollers with 1 13/16 diameter wheels use heavy duty sealed bearings and are combined with a stainless-steel track. This will ensure effortless operation for years to come. The handle hardware finish is available in white, tan, black or an optional brushed nickel. **Available with low-E glass and Argon Gas for maximum energy efficiency**. This thermally broken frame system combined with energy efficient glass and the proven durability of aluminum makes this door system a solid long-term investment in your home.

## Advantages of choosing an aluminum door

---

There are many good reasons to choose an aluminum framed door for your patio door. Just a few of these include:

1. **Strength**. Aluminum is one of the strongest door materials on the market. A good

aluminum door can last for decades.

2. **Lightweight.** Aluminum is very strong, yet very lightweight. That makes it easy and quick to install as well as easy to open and close.
3. **Affordable.** Aluminum is much more affordable than other door frame materials, such as wood, fiberglass or steel.
4. **Corrosion resistance.** Unlike steel doors that can corrode or rust over time, an aluminum door will stand up to weather, including the harsh Arizona sun. Extreme temperatures won't affect aluminum.
5. **Recyclable.** Aluminum is one of the most recycled materials in the world. That means when it comes time to replace your door, you won't be adding to the mass of building materials in America's landfills.
6. **Won't warp or rot.** While wooden frames can rot over time and steel can warp, an aluminum door will hold its shape over time.
7. **Versatility.** Aluminum frames come in a rainbow of colors and finishes. There's something to go with every design taste and architectural style.
8. **Permanent finish.** Aluminum door frames are finished using a powder coating process. That means the color fuses with the aluminum, so it won't flake or chip as traditional painting can. You'll never have to repaint or refinish your aluminum door frame.
9. **Energy efficiency.** Aluminum frames with a thermal block combined with double glaze glass are very energy efficient and can stand up to even the Arizona sun.
